Choose CIMCOOL® Fluids For Your Spring Clean Out

Cincinnati, Ohio—2013— The metalworking industry can be a messy business. Shop waste, metal swarf, oil, mold, and bacteria can cause your operating fluid mix to deteriorate and with it your equipment's performance. Choosing the right product for your shop clean out depends on the nature of soil to be removed and the type of metal to be cleaned. There are product lines available in low-and high-alkaline solutions for a variety of cleaning applications, such as parts and production, machines, floors, and other general purpose manufacturing needs.

These CIMCOOL® products will be beneficial for your spring clean out:

CIMGUARD® 10 is available in bulk or aerosol containers. It is a general-purpose solvent-based corrosion preventive, an organic rust inhibitor, which has water-displacing properties, and is a fingerprint neutralizer. The protective coating is thin, transparent, colorless, and slightly oily. It can be used with steel, cast iron, copper, zinc, and aluminum.

CIMCLEAN® 30 is a general-purpose machine cleaner, which can be used on individual machine tanks and central systems. CIMCLEAN 30 is recommended for cleaning individual machine and central system reservoirs, metalworking fluid lines, premix tanks, machines, and parts. It effectively removes bio-films, dirt, grit, chip-deposits, insoluble soaps, and oils from central systems and individual machine sumps. CIMCLEAN 30 contains corrosion inhibitors to protect machines and parts from rusting during the cleaning process. It is intended for use in systems working ferrous metals. CIMCLEAN 30 can also be used for general-purpose floor cleaning. It can be used in power washers, steam cleaners, and automated floor scrubbers. It can be used in 3 ways: as a cleaner, with used fluid during shutdown, and with used fluid during production.

CIMCLEAN® 40 is a general-purpose machine, tank, and system cleaner for use where the cleaner may contact aluminum. CIMCLEAN 40 is recommended for cleaning individual machine and central system reservoirs, metalworking fluid lines, premix tanks, machines, and parts. It effectively removes bio-films, dirt, grit, chip-deposits, insoluble soaps, and oils from central systems and individual machine sumps. CIMCLEAN 40 contains corrosion inhibitors to protect machines and parts from rusting during the cleaning process. It is intended for use in systems working non-ferrous metals. It can be used in 3 ways: as a cleaner, with used fluid during shutdown, and with used fluid during production.
