OAK INTERNATIONAL'S OAK SIGNATURE Brand of metalworking fluids revolutionizes the metalworking and metalforming industries.

Sturgis, MI, March 2007 - OAK INTERNATIONAL, a wholly owned subsidiary of Milacron, Inc (Cincinnati), continues to shape the metalworking and metalforming industries with the introduction of the **OAK SIGNATURE** brand of metalworking fluids.

The **OAK SIGNATURE** brand offers wide and varied solutions that address the rigorous fluid challenges of metalcutting, metalforming, cleaning, corrosion inhibition and specialty applications. Specific brands include:

OAKFLO™ - Formulated to address the needs of the machine tool and metalworking systems and to offer safer and less-expensive alternatives to straight oil machining and grinding systems. The fluids provide users with proven lubricity, superior cooling and excellent corrosion control. **OAKFLO™** also eliminates rancidity and dermatitis issues and promotes efficient, easy part cleaning. Typical applications include: milling, drilling, turning, reaming, tapping, broaching, sawing and grinding. Typical materials include: cast iron, stainless steel, carbon steel, cast steel, aluminum, bronze, brass, copper and many exotic alloys.

OAKFORM™ - Stamping and drawing fluids meet or exceed the highest quality standards for a diversity of metalforming applications. In addition to superior lubricity, cooling and corrosion control, these fluids have been shown to provide extreme-pressure lubrication especially for severe stamping and drawing. In addition, they have proven to significantly lower manufacturing costs in many metalforming operations.

OAKTEC™ - Multipurpose corrosion inhibitors address a full line of in-process and long-term storage RP applications. Available in solvent, oil, water soluble and synthetics, these formulations fit virtually every need and application.

OAKSPEC™ - Specialty fluids, lubricants, allied products and processes meet a diversity of customer-specific requirements from fine blanking to laminate stamping, hydro-forming to tube forming, glass grinding to creep-feed grinding.

OAK INTERNATIONAL has provided fluid solutions to the metalworking/metalforming community for more than quarter of a century. Each fluid product is laboratory tested to simulate actual field performance and must successfully complete tests for corrosion prevention, lubricity and a variety of post-application operations requirements.

For additional information on these and other OAK INTERNATIONAL products, please visit our website at www.OAKINTERNATIONAL.com, and click on the **OAK SIGNATURE** Product Information menu.

Oak International, headquartered in Sturgis Michigan is the world leader in metalworking fluid technology.
